Analysis Bandwidth

1 GHz

Cut R&D Costs 1 GHz Analysis Bandwidth Signal Analyzer

The 1 GHz analysis bandwidth supports wider-band microwave and millimeter-wave communications while high flatness performance facilitates multicarrier signal analysis. With lower costs and higher measurement accuracy, the MS2850A is ideal for R&D and manufacturing of wideband next-generation communications systems, such as 5G mobile and broadcast satellites.

EVM Performance

<1%

Wide Dynamic Range for Higher Wideband Signal Measurement Accuracy

The measurement dynamic range is better than 140 dB\(^1\) at a 1 GHz analysis bandwidth. This performance is equivalent to <1% EVM performance which is considered Peak-to-Peak of modulation waveform at measurement of a single 5G carrier (100 MHz wide)\(^2\).

With its wide dynamic range, the MS2850A increases the reliability of next-generation, wideband communications systems.

\(a1\): Difference between ADC Clipping level and DANL.

\(a2\): At 100 MHz bandwidth 64QAM xP0SCH

Signal Analyzer MS2850A Features

Main Frame Functions/Performance

The Signal Analyzer MS2850A is a spectrum analyzer/signal analyzer with a maximum analysis bandwidth of 1 GHz and a frequency range of 9 kHz to either 32 GHz or 44.5 GHz. Its high cost-performance helps cut rising R&D and manufacturing CAPEX costs in future deployments of microwave and millimeter-wave wideband communications systems.

1 GHz Analysis Bandwidth
The 1 GHz analysis bandwidth supports wider bands for microwave and millimeter-wave communications systems, such as 5G mobile and broadcast satellites.

The signal analyzer function using FFT (Fast Fourier transform) analysis supports spectrum displays, spectrogram displays, and applications where frequency and phase change with elapsed time. In addition, frequency bands required for 5G measurements are covered and all-in-one evaluation of multicarrier signals is supported by the 5G measurement software.

Analysis Bandwidth: 255 MHz (standard)
510 MHz (option), 1 GHz (option)

Excellent Flatness Performance
The amplitude and phase flatness performance*1 over a wide analysis bandwidth of 1 GHz exceed that of other signal analyzers*2. With this performance, the MS2850A supports high-accuracy amplitude and phase measurements for each carrier in wideband communications systems, such as 5G mobile, to play a key role in improving the quality of radio communications equipment.

Center Frequency: 28 GHz, at Center Frequency ±500 MHz
In-band Frequency Characteristics: ±1.2 dB (nom.)
In-band Phase Linearity: 5 deg. p-p (nom.)

*1: Stipulated as In-band Frequency Characteristics and In-band Phase Linearity in Anritsu specifications
*2: Anritsu test at May 2017

Wide Dynamic Range
High ADC** Clipping Level
Wide Measurement Dynamic Range at Difference from DANL***
The MS2850A has a high ADC clipping level over an analysis bandwidth of 1 GHz. This performance can be used to obtain a wider difference from the DANL, which rises when inputting the actual signal input level and inputting a wideband signal when using an attenuator.

This wide dynamic range performance helps obtain more accurate EVM values at measurement of 5G signals. For example, in the 28 GHz band, the measured dynamic range at the difference between the ADC clipping level and DANL is better than 140 dB (ref.).

Center Frequency: 28 GHz
ADC Clipping Level: 0 dBm*3 (CW)
DANL: –142 dBm/Hz*4
Dynamic Range: 142 dB (ref.)

*3: Analog to Digital Converter
*4: Displayed Average Noise Level
*5: meas. means value measured as design stage but not guaranteed specification

Input Level
High
0 dBm
ADC Clipping Level
–14 dBm
–142 dBm/Hz
–147 dBm/Hz
DANL

The measurement dynamic range widens if the ADC clipping level is high even when the DANL is quite high.

High SFDR (Spurious Free Dynamic Range)
–70 dBc at 1 GHz Analysis Bandwidth
The MS2850A suppresses spurious generation due to ADC over the 1 GHz analysis bandwidth, assuring a wide measurement dynamic range at wideband signal analysis.

SFDR
800 MHz ≤ Frequency < 4.2 GHz: –60 dBc (nom.)
4.2 GHz ≤ Frequency ≤ 44.5 GHz: –70 dBc (nom.)
Signal Analyzer MS2850A Features

5G Measurement Software

Dedicated software for 5G measurements can be installed in the Signal Analyzer MS2850A, and detailed and accurate measurements are backed by the high-performance 1 GHz (max.) analysis bandwidth and high measurement dynamic range.

High EVM Performance due to MS2850A Wide Dynamic Range (EVM: <1%)

Combining the 5G analysis software with the MS2850A offers an EVM performance of <1% at measurement of a 5G single carrier (100 MHz wide, 28 GHz)*1. And even wider dynamic range performance is achieved over the difference between the MS2850A high ADC clipping level (0 dBm*2) and DANL. Pressing [Auto Range] performs measurement at the optimum level setting.

Multicarrier Analysis and Batch Measurement at 1 GHz

The 5G measurement software uses the 1 GHz analysis bandwidth of the MS2850A to support batch (all-at-once) measurement of all 5G signal carriers (8 carriers x 100 MHz wide). The characteristics of each single carrier can be evaluated quickly at the same time without needing to measure each single carrier separately.

Timing Difference Measurement

Batch (all-at-once) measurement of all carriers not only supports EVM and frequency error measurements for each carrier, but also supports timing difference measurements for each carrier.

High-Accuracy Measurement due to MS2850A Amplitude and Phase Flatness

The amplitude and phase flatness performance of the MS2850A over the wide analysis bandwidth of 1 GHz (max.) exceed that of other signal analyzers. For example, suppressing the measuring instrument error enables phase adjustment of each path in an antenna array.

MS2850A Specifications

Signal Analyzer MS2850A Functions

The Signal Analyzer MS2850A has the analysis bandwidth and excellent flatness performance required for R&D and manufacturing of next-generation wideband communications systems. In addition to versatile basic functions for more convenient testing, it also has useful troubleshooting functions, such as Capture&Replay and sub-trace displays.

### Multiple Display Modes at FFT Analysis

The MS2850A has a built-in 255 MHz analysis bandwidth FFT analysis function. The measured signal is captured for display in various domains. Troubleshooting efficiency is greatly improved because phenomena such as spectrum transients that cannot be monitored by sweep-type spectrum analyzers can be observed. The analysis bandwidth can be extended optionally to 510 MHz and 1 GHz.

### High Dynamic Range Performance

Analysis of wideband signals of 1 GHz does not simply require a signal analyzer with a wide analysis bandwidth. Accurate signal capture and analysis requires securing good dynamic range performance.

With a high ADC clipping level*1 and low DANL, the MS2850A achieves a dynamic range of better than 140 dB*2 at a center frequency of 28 GHz. Additionally, the SFDR (Spurious Free Dynamic Range) performance is an excellent –70 dBc at an analysis bandwidth of 1 GHz. As a result, the MS2850A is ideal for accurately capturing and analyzing the true performance next-generation wideband communications systems.

**Dynamic Range:** 142 dB (Center Frequency 28 GHz, CW, ref.)

<td>DANL</td>
<td>–142 dBm/Hz**2</td>
</tr>
</tbody>
</table>

**1:** Mixer level (CW) for using ADC at full scale  
**2:** meas. means value measured as design stage but not guaranteed specification

### Capture & Replay Function

Waveform data can be saved (captured) in the internal memory for later display and replay. The causes of problems can be resolved quickly and easily because the display mode can be switched during replay.

#### Maximum capture times for each frequency span

<td>1300 MHz</td>
<td>3 s</td>
</tr>
</tbody>
</table>

Refer to the MS2850A data sheet for details.

### Excellent Phase and Amplitude Flatness Performance

The phase-array antenna performs electronic scanning to control the phase of the parallel antenna elements because the mean width of the antenna directivity will become wider than expected if the phase of each antenna element is not the same. Consequently, the signal analyzer must be able to measure phase with high accuracy. Additionally, excellent amplitude characteristics are required at evaluation of communications using wideband signals, such as 5G mobile.

The MS2850A has excellent phase and amplitude flatness over a wide analysis bandwidth of 1 GHz.

**Center Frequency 28 GHz, at Center Frequency ±500 MHz**

<td>In-band Phase Linearity (Phase Flatness)</td>
<td>5˚ p-p (nom.)</td>
</tr>
</tbody>
</table>
Spectrum Display
This function graphically displays the amplitude on the y-axis and the frequency on the x-axis. The captured IQ data are FFT-processed, and the time-domain data are converted to the frequency domain to display the spectrum. This is useful for confirming spectrum transients that cannot be monitored using spectrum analyzer functions.

Power vs. Time
The Power vs. Time trace displays a graph with amplitude on the y-axis and time on the x-axis to confirm changes in power with time of measured signals.

Sub-trace Display
This function is useful for checking the spectrum while changing the analysis time period arbitrarily (blue display) such as when confirming burst signal rise and fall times. Simultaneous display of the time axis (sub-trace) and frequency axis (main trace) is useful for visually confirming when spectrum waveform distortion components (adjacent channel components, etc.) occur in the time domain.

CCDF/APD
The CCDF trace displays the power variation probability on the y-axis and power variation on the y-axis to confirm the CCDF and APD of measured signals.

CCDF (Complementary Cumulative Distribution Function):
The CCDF display indicates the cumulative distribution of transient power variations compared to average power.

APD (Amplitude Probability Density):
The APD display indicates the probability distribution of transient power.

Spectrogram
The Spectrogram trace displays the level as color with frequency on the y-axis and time on the x-axis. The captured IQ data is FFT processed to confirm time variations in the continuous spectrum. It is useful for monitoring frequency hopping and transient signals.
**Signal Analyzer MS2850A Functions**

**Versatile Built-in Functions**

**Spectrum Emission Mask**
This function splits the offset part into up to 12 segments; the measurement parameters and limit lines can be specified to measure the peak power and margin for each segment. The results are tabulated below the trace and marked PASS/FAIL. Pre-installed templates for each standard support easy parameter setting.

**Spurious Emission**
This function splits the frequency range into up to 20 segments for sweeping; the measurement parameters and limit lines can be specified to measure the peak power and margin for each segment. The results are tabulated below the trace and marked PASS/FAIL.

**Burst Average Power**
The average power for the range specified by two markers is displayed in the time domain. Measurement only requires setting the measurement start and stop positions on the screen. True performance is measured using the noise cancellation function to subtract main-frame noise from the measurement result. Pre-installed templates for each standard support easy parameter setting.

**Highest 10 Markers**
This function sets the threshold level and auto-detects peaks in the X (frequency) and Y (level/time) directions.

**Multi-marker & Marker List**
Up to 10 markers can be set for this function. Markers may be either a spot or a zone. Using a zone marker, the peak of a signal with an unstable variable frequency can be tracked and measured. Not only can the 10 markers be listed below the trace but the differences between markers can be calculated and displayed using the delta setting.

**Gate View**
For efficient gate sweeping when sweeping only the burst-signal on period, the spectrum analyzer functions include an auxiliary screen (Gate View) to display the gate sweep section.
Microwave Preselector Bypass (Standard Function)
Passing the input signal through a preselector removes generated spurious at microwave and mmWave band measurements. However, in this case, the signal passband width is restricted and the flatness of the in-band frequency characteristics is degraded, both of which can adversely affect FFT analysis and modulation analysis times. As a result, adding a preselector bypass improves the in-band frequency characteristics and supports analysis up to wide bandwidths of 44.5 GHz.

2 dB Step Attenuator (Standard Function)
The built-in attenuator can be set with a resolution of 2 dB and the level of the input signal to the mixer can be adjusted with high resolution to make best use of the MS2850A dynamic range.

Phase Noise Measurement Function (MS2850A-010)
Phase noise can be measured over a frequency offset of 10 Hz to 10 MHz. The local and remote phase noise vs the carrier signal can each be measured by automatically switching to the best filter.

Noise Floor Reduction (MS2850A-051)
The Noise Floor Reduction (NFR) function increases the measurement accuracy for low-level signals. It subtracts the internal noise components (11 dB max. nominal) of the measuring instrument itself from the displayed measurement result.

Microwave Preamplifier (MS2850A-068)
With a 20 dB gain, this option improves DANL. It is useful for measuring low-level signals such as noise and interference as well as for measurements via antennas with large path losses.

Frequency Range:
- 100 kHz to 32 GHz (with MS2850A-047)
- 100 kHz to 44.5 GHz (with MS2850A-046)

Low Second Harmonic Distortion (MS2850A-076)
Installation of this option is recommended when measuring secondary harmonics at an input frequency range of 2 GHz to 22.25 GHz. Installing this option upgrades the MS2850A secondary harmonic distortion performance.

USB Power Sensor (Sold Separately)
Connecting this sensor to the MS2850A supports power and absolute power measurements.

High Performance Waveguide Mixer/External Mixers (Harmonic Mixers)

Two types of mixer can be connected to the MS2850A series (32 GHz/44.5 GHz models) for millimeter-wave-band measurements; spectrum measurements up to 325 GHz are supported using either a High-Performance Waveguide Mixer or an external harmonic mixer. In particular, High Performance Waveguide Mixers are ideal for analyzing the true spectrum of millimeter-wave-band transmitters due to its excellent wide dynamic range.

High Performance Waveguide Mixer MA2806A/MA2808A

The widest analysis bandwidth of MS2850A is 510 MHz when connecting MS2850A to MA2806A/MA280808A.

Features

- Wide dynamic range based on excellent minimum sensitivity and P1dB performance
- Image-response-free measurement of wideband signals plus high IF frequency and PS function**

The MA2806A and MA2808A have a dedicated multiplier, amplifier, bandpass filter, etc., supporting an excellent conversion loss of at least 10 dB better than conventional harmonic mixers, as well as P1dB performance exceeding 0 dBm. When used in combination with the MS2850A series (32 GHz/44.5 GHz models) the display average noise performance level is excellent at \(-150\) dBm/Hz (meas.)** at 75 GHz. Due to this wide dynamic range, the MA2806A and MA2808A support evaluation of the true spurious performance of wider-band, millimeterwave wireless transmitters as well as various types of millimeter-wave equipment that cannot be evaluated accurately using conventional harmonic-mixer and down-converter methods.

Connection to the MS2850A series (32 GHz/44.5 GHz models) is as easy as simply connecting a cable to the IF port. Conversion loss data saved in a USB memory stick is loaded into the MS2850A series for reflection in the measured values.

FFT Analysis in Millimeter Wave Band

The signal-analyzer functions can be used by connecting either the High-Performance Waveguide mixer or an external mixer. This helps improve troubleshooting efficiency when confirming transient phenomena, such as a degraded spectrum that cannot be captured using a sweep-type spectrum analyzer.

Additionally, MS2850A supports down converting signals up to a maximum bandwidth of 2.5 GHz through IF out port. This can be used as down convertor when performing modulation analysis by digitizing with an oscilloscope, etc.

Measurement image: Down convert signals with 80 GHz center frequency and 2.5 GHz^2 bandwidth to 1.95 GHz

\*1: The widest analysis bandwidth of MS2850A is 510 MHz.

**Pre-Standard CP-OFDM Uplink (MX285051A-051)**
This software is for measuring the RF Tx characteristics of 5G base stations and terminals.

**Vector Signal Analysis Software (MX269017A)**
**APSK Analysis (MX269017A-001)**
**Higher-Order QAM Analysis (MX269017A-011)**
This software is for measuring the RF Tx characteristics of base stations and terminals using various digital wireless methods.

Supported Modulation Technologies
- BPSK, QPSK, O-QPSK, π/4 DQPSK, 8PSK, 16QAM, 32QAM, 64QAM, 128QAM, 256QAM, 2FSK, 4FSK, 2ASK, 4ASK, H-CPM, MSK

The software options as below are required.

Signal Analyzer MS2850A Functions

Software Options

5G Standard Measurement Software (Base License) MX285051A
Pre-Standard CP-OFDM Downlink MX285051A-001
Pre-Standard CP-OFDM Uplink MX285051A-051

The MX285051A-001 and MX285051A-051 software packages are for measuring the RF characteristics of CP-OFDM modulation downlink and uplink signals expected to be used for 5G demonstration tests and test operations.

Single Carrier Measurement
This function analyzes a 100 MHz band carrier to display the constellation, frequency error, Tx power, modulation accuracy (EVM), etc.

Multicarrier Measurement
Combination with the Analysis Bandwidth Extension to 1 GHz MS2850A-034 option supports batch (all-at-once) analysis of up to eight 100 MHz band carriers to display the frequency error for each carrier, Tx power, EVM, timing difference, etc.

Signal Analyzer MS2850A Functions

Single Carrier Measurement

Constellation
The frequency error for all sub-carriers, Tx power, EVM, etc., are displayed together on a constellation graph. Since peak values can be displayed simultaneously with mean values, the randomness of characteristics can be evaluated by comparing both values. Characteristics can be confirmed easily using the many intuitive graph displays.

Multi Carrier Measurement

EVM vs. RB
Power vs. RB
Up to eight carriers can be analyzed at once as a batch to display the EVM and power for each resource block in the sub-frame section as a gradation. Since the power boosting applied to each resource block and the location of the degraded EVM caused by in-band interference can be monitored and compared visually for each carrier, this function plays a key role at R&D troubleshooting.

Spectral Flatness
Graphs of the amplitude and phase for each sub-carrier are displayed for all symbols in a specified measurement region.

Summary
Various data, such as the frequency error, Tx power, EVM, etc., can be analyzed at once as a batch for each carrier, which is useful for measuring the timing difference with other carriers based on a specified carrier.

Summary
Various data, such as the EVM and power for each channel (SS, xPDSCH, xPUSCH, xPDCCH), are tabulated.
Signal Analyzer MS2850A Key Layout

Front Panel

1. **Power switch**
   Press to switch between the standby state in which AC power is supplied and the Power On state in which the MS2850A is under operation. The Power lamp lights up orange in the standby state, and lights up green in the Power On state. Press the power switch for a reasonably long duration (for about two seconds).

2. **1st Local Output connector**
   Reserved for future function expansion

3. **SSD lamp**
   Lights when the MS2850A internal solid state drive is being accessed.

4. **Copy key**
   Press to capture a screen image from the display and save it to a file.

5. **Recall key**
   Press to recall a parameter file.

6. **Save key**
   Press to save a parameter file.

7. **Cal key**
   Press to display the calibration execution menu.

8. **Local key**
   Press to return to local operation from remote control operation through GPIB, Ethernet or USB (B), and enable panel settings.

9. **Remote lamp**
   Lights up when the MS2850A is in a remote control state.

10. **Preset key**
    Resets parameters to their initial settings.

11. **Function keys**
    Used for selecting or executing function menu displayed on the right of the screen. The function menu contents are provided in multiple pages and layers.

12. **Application key**
    Press to switch between applications.

13. **Shift key**
    Used to operate any keys with functions described in blue characters on the panel. First press the Shift key, then press the target key when the Shift key lamp lights up green.

14. **Main function keys 2**
    Used to set or execute main functions of the MS2850A. Executable functions vary depending on the application currently selected.

15. **Rotary knob/Cursor keys/Enter key/Cancel key**
    The rotary knob and cursor keys are used to select display items or change settings.

16. **Main function keys 1**
    Used to set or execute main functions of the MS2850A. Executable functions vary depending on the application currently selected.

17. **RF Input connector**
    Used for inputting RF signal.
    K-J, 50Ω
    Maximum input level:
    +30 dBm (Continuous wave average power, Input attenuator: ≥10 dB, Preamp: Off)

18. **Numeric keypad**
    Used to enter numbers on parameter setup screens.

19. **USB connector (type A)**
    Used to connect a USB keyboard or mouse or the USB memory.
**Signal Analyzer MS2850A Key Layout**

**Rear Panel**

20. **AC inlet**
   Used for supplying power.

21. **USB connectors (type A)**
   Used to connect a USB keyboard or mouse or USB memory.

22. **USB connector (type B)**
   Used when controlling the MS2850A externally via USB.

23. **LAN (Ethernet) connector**
   Used for connecting to a personal computer to implement control over LAN or for Ethernet connection.

24. **Monitor Out connector**
   Used for connection with an external display.

25. **Primary SSD slot**
   This is a solid state drive slot.

26. **GPIB connector**
   Used when controlling the MS2850A externally via GPIB.

27. **Secondary SSD slot**
   This is a solid state drive slot for options.

28. **Ref Input connector (reference frequency signal input connector)**
   Inputs an external reference frequency signal (5/10/13 MHz). It is used for inputting reference frequency signals with accuracy higher than that of those inside the MS2850A, or for synchronizing the frequency of the MS2850A to that of other device.

29. **Buffer Out connector (reference frequency signal output connector)**
   Outputs the reference frequency signal (10 MHz) generated inside the MS2850A. It is used for synchronizing the frequencies between other devices and the MS2850A based on the reference frequency signal output from this connector.

30. **SA Trigger Input connector**
   This is a BNC connector used to input the external trigger signal (TTL) for the Spectrum Analyzer or Signal Analyzer application.

31. **Sweep Status Out connector**
   Outputs a signal that is enabled when an internal measurement is performed or measurement data is obtained.

32. **IF Output connector**
   Monitor output of internal IF signal
   Connector: SMA-J, 50Ω
   IF Output Frequency: 1875 MHz, 1950 MHz

33. **Noise Source Drive connector**
   Supply (+28 V) of the Noise Source Drive.
   Requires installation of MS2850A-017/117.

34. **CAL Port Connector**
   Reserved for Future Use

35. **Trigger Input 2 Connector**
   BNC connector for input of external trigger signal (3.3 V LVCMOS) for spectrum analyzer and signal analyzer applications

36. **Trigger Output 1 Connector**
   BNC Connector for output of trigger signal (3.3 V LVCMOS)

37. **Trigger Output 2 Connector**
   BNC connector for output of trigger signal (3.3 V LVCMOS)

38. **USB 3.0 Connector**
   USB3.0 Type-B connector for data transfer.
   Used when MS2850A-054 option equipped.

39. **PCIe X8 Connector**
   PCIe (X8/Gen2) connector for data transfer.
   Used when MS2850A-053 option equipped.

Signal Analyzer MS2850A Specifications

General Specifications

Dimensions and Mass
426 (W) × 177 (H) × 390 (D) mm (excluding protrusions)
≤21 kg (with MS2850A-046 or 047 and other options installed)

Power
Power voltage: 100 V(ac) to 120 V(ac)/200 V(ac) to 240 V(ac)
Frequency: 50 Hz/60 Hz
Power Consumption:
≤500 VA (with all options installed)
320 VA (nom.) (with MS2850A-047 or 046 and MS2850A-067/068/032/033/034 installed, but excluding other options)

EU Standards (CE Marking)
EMC: EN61326-1, EN61000-3-2
LVD: EN61010-1
RoHS: EN50581

OS
Windows 7 (64 bit)

5G Measurement Software
Refer to the MX2690xxA Series, MX2830xxA Series, MX2850xxA Series Measurement Software brochure for the specification details.

Typical (typ.):
Performance not warranted. Most products meet typical performance.

Nominal (nom.):
Values not warranted. Included to facilitate application of product.

Measured (meas.):
Performance not warranted. Data actually measured from randomly selected measuring instruments.
## Signal Analyzer MS2850A Ordering Information

Please specify the model/order number, name and quantity when ordering.

The names listed in the chart below are Order Names. The actual name of the item may differ from the Order Name.

- W3015AE: MX269021A Operation Manual (Operation)
- W3065AE: MX269021A Operation Manual (Remote Control)
- W3209AE: MX269022A Operation Manual (Operation)
- W3210AE: MX269022A Operation Manual (Remote Control)
- W3521AE: MX269023A Operation Manual (Operation)
- W3522AE: MX269023A Operation Manual (Remote Control)

The following options are installed as standard and do not require separate orders when ordering the MS2850A-046/047.

- Standard Software: MX269000A
- Analysis Bandwidth: 255 MHz: MS2850A-032
- Microwave Preselector Bypass: MS2850A-067

Requires Installation Kit Z1957A when retrofitting options or installing software. The instruction manuals are published on our website except some.
### Signal Analyzer MS2850A Ordering Information

#### Model/Order No. | Name
---|---
MA2806A | High Performance Waveguide Mixer (50 to 75 GHz)
MA2808A | High Performance Waveguide Mixer (60 to 90 GHz)

#### Standard accessories
- MA2806A USB Memory (Saved conversion loss data, for MA2806A): 1 pc
- MA2808A USB Memory (Saved conversion loss data, for MA2808A): 1 pc
- AC Adapter: 1 pc
- Power Cord: 1 pc
- Coaxial Cord, 1 m (SMA-P · SUCOFLEX104PE · SMA-P, DC to 18 GHz, 50Ω): 1 pc

#### External Mixer (Harmonic Mixer)
- MA2741C External Mixer (26.5 GHz to 40 GHz)
- MA2742C External Mixer (33 GHz to 50 GHz)
- MA2743C External Mixer (40 GHz to 60 GHz)
- MA2744C External Mixer (50 GHz to 75 GHz)
- MA2745C External Mixer (60 GHz to 90 GHz)
- MA2746C External Mixer (75 GHz to 110 GHz)
- MA2747C External Mixer (90 GHz to 140 GHz)
- MA2748C External Mixer (110 GHz to 170 GHz)
- MA2749C External Mixer (140 GHz to 220 GHz)
- MA2750C External Mixer (170 GHz to 260 GHz)
- MA2751C External Mixer (220 GHz to 325 GHz)

#### Application Parts
- Ruggedized K-to-Type N Adapter (34AKNF50)
  - This adapter converts the MS2850A-046 RF Input connector (K-J) to N-J. It is used by attachment to the MS2850A main unit.
- Power Divider
- Four-port Junction Pad (K connector, DC to 26.5 GHz, 50Ω)
- Coaxial Adapter (K-P · K-J, SMA)
- Coaxial Cord, 1 m (BNC-P · RG58A/U · BNC-P)
- Coaxial Cord, 2 m (BNC-P · RG58A/U · BNC-P)
- Coaxial Cord, 0.5 m (BNC-P · RG58A/U · BNC-P)
- Coaxial Adapter (DC to 12.4 GHz, 50Ω, N-P · SMA-J)
- N-SMA Adaptor (DC to 26.5 GHz, 50Ω, N-P · SMA-J)
- Coaxial Cable, 1.0 m for 40 GHz (DC to 40 GHz, approx. 1 m, SF102A, 11K254/K254/1.0M)
- Coaxial Cable, 0.5 m for 40 GHz (DC to 40 GHz, approx. 0.5 m, SF102A, 11K254/K254/0.5M)
- Fixed Attenuator (DC to 40 GHz, 3 dB)
- Ethernet Cable (Shield type, Straight, 1 m)
- Ethernet Cable (Shield type, Cross, 1 m)
- Ethernet Cable (Shield type, Cross, 3 m)
- GPIB Cable, 2.0 m
- Rack Mount Kit (EIA)
- Rack Mount Kit (JIS)
- Carrying Case (Hard type, with casters)
- Carrying Case (Hard type, with casters)
- Carrying Case (Hard type, with casters)
- Front Cover for 1MW4U
- Inline Peak Power Sensor
- USB Power Sensor
- Microwave USB Power Sensor
- Microwave USB Power Sensor
- Microwave USB Power Sensor
- Microwave USB Power Sensor
- Microwave USB Power Sensor
- USB Power Sensor
- Microwave USB Power Sensor
- USB Power Sensor
- USB Power Sensor
- USB Power Sensor
- Installation Kit (required when retrofitting options or installing software)

#### External Interface for High Speed Data Transfer
- PCIe Host Adapter
- PCIe x8 Cable (2 m)

*: The Carrying Case B0636C includes the Front Panel Protective Cover (B0671A)
Signal Analyzer MS2850A Related Products

**Signal Analyzer MS2840A**
9 kHz to 3.6 GHz/6 GHz/26.5 GHz/44.5 GHz/325 GHz (with external mixer)
Analysis bandwidth: 31.25 MHz (Standard), Max. 125 MHz (Option)

The MS2840A is a mid-range spectrum analyzer/signal analyzer with excellent multi-functions and narrowband performance.

**Features**
- Dedicated low-phase-noise option for same phase noise performance as high-end instruments (3.6 GHz/6 GHz models).
- Monitor actual spectrum of mmWave transmitters and excellent phase noise performance and DANL using high-performance waveguide mixer (50 GHz to 90 GHz) (26.5 GHz/44.5 GHz models).
- Versatile measurement options including phase noise measurement function, vector modulation analysis, analog modulation (FM, ΦM, AM) analysis, built-in signal generator, noise figure (NF) measurement, Noise Floor Reduction.
- High cost-performance substitute for aging high-end models.

**Signal Analyzer MS2850A**
9 kHz to 3.6 GHz/6 GHz/13.5 GHz/26.5 GHz/43 GHz/325 GHz (with external mixer)
Analysis bandwidth: 31.25 MHz (Standard), Max. 125 MHz (Option)

The MS2850A is a mid-range signal analyzer/spectrum analyzer with excellent versatility and cost-performance.

**Features**
- Both vector and analog signal generators can be built-in. All-in-one TRx evaluations of digital and analog radios are supported in combination with the BER measurement function, and built-in audio analyzer, etc. BER.
- Versatile measurement options include digital modulation analysis for LTE/LTE-Advanced, WLAN, etc., vector modulation analysis, analog modulation analysis (FM, ΦM, AM), NF measurements, internal signal generator tracking and more.
- The Capture&Playback function using the vector signal generator can replay the onsite radio-wave environment.

**Signal Analyzer MS2690A/MS2691A/MS2692A**
50 Hz to 6 GHz/13.5 GHz/26.5 GHz
Analysis bandwidth: 31.25 MHz (Standard), Max. 125 MHz (Option)

With excellent phase noise performance, dynamic range, and measurement level accuracy, this is a high-standard signal analyzer/spectrum analyzer.

**Features**
- The baseband can be extended to 6 GHz and the built-in calibration oscillator supports excellent measurement level accuracy and modulation accuracy from 50 Hz to 6 GHz.
- A vector signal generator can be installed. All-in-one TRx evaluations of digital radio are supported in combination with the BER measurement function, etc.
- Versatile measurement options include digital modulation analysis for LTE/LTE-Advanced, WLAN, etc., vector modulation analysis, NF measurements, and more.
- The Capture&Playback function using the vector signal generator can replay the onsite radio-wave environment.
- The compact design cuts the benchtop footprint.
